

Acknowledgment

I am deeply indebted to my advisor, Professor Carl Sechen, for his constant support. Without his help, this work would not be possible. I would also like to thank the members of my committee who braved the *storm of the century* to attend my defense: T. P. Ma, Jean-Marc Delosme and David Kriegman. Their advice and patience is appreciated. I would also like to thank Alfred Ganz for his invaluable advice on parallel processing and computer systems. A special thanks also goes to Peter Kindlmann who greatly enriched my knowledge with his exceptional insights into engineering. Unfortunately, he was unable to attend my defense due to health reasons. We hope his recovery will be swift and lasting.

I would like to thank my best friends at Yale, Kalapi Roy and Richard Weier. Those long nights at the computer in Becton lab will not be forgotten. I would also like to thank Ted Stanion for the *tif* translator and his outstanding advice throughout the years. In addition, I must thank Wern-Jieh Sun and Ken Yamaguchi for their valuable contributions to the TimberWolf system.

I would also like to acknowledge my comrades in electrical engineering: Jer-Jaw “J. J. McQua” Hsu, Qicheng Yu, David Guan, Eugene Liu and Dan Kasha.

I am also indebted to the fellow graduate students before me: Kai-Win Lee, Jimmy Lam, Dahe Chen and Theo Omtzigt.

I would also like to thank the library staff at SMU for their tireless efforts.

Lastly, I would like to thank my family for their support. I am greatly indebted to my brother who bought me a color printer and copied this thesis. Above all, I cannot express my full gratitude to my brother-in-law Bill Ianni who patiently proofread this entire thesis.

I dedicate this thesis to my mother and father.
